

## YOU ARE INVITED TO A TRAINING WITH ELSEVIER TO SUPPORT GEOSCIENCE RESEARCH

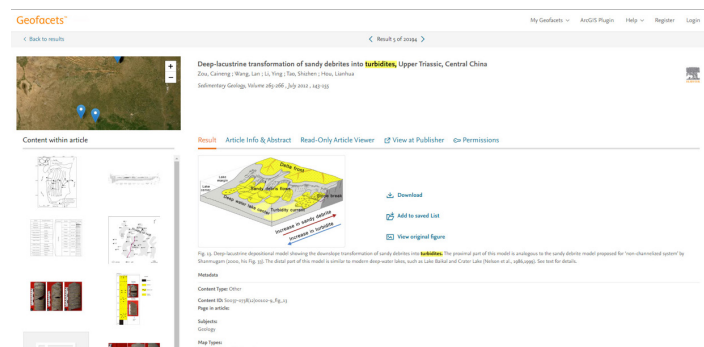

June 09, 2021, Wednesday  
Time: 15.00

During the Covid-19 pandemic and lockdowns that came with it, like everyone else, geoscientist have to handle everything remotely, and this has proved that having the right digital tools at hand is the key to efficiently plan and analyse field trips, and also to discover needed information virtually.

This webinar, brought to you to focus on these issues, will help you get to know how Geofacets support geoscience research and education with its maps, plots, tables, and images that amount to more than 2 million in total, while teaching you how to be prepared for a virtual field trip using digital tools like Geofacets and Google Earth.

At this webinar, Geofacets Senior Product Manager Sandra Merten will teach you how to

- run applied analysis on class,
- find maps, surface photos, sections, and articles faster to get latest information about an area
- get geospatial information by using maps downloaded from Geofacets, and integrating these to Google Earth,
- manage references with the help of figures, plots, and citations downloaded from Geofacets and much more.
